

Your situation

You have *not* informed participants that the research materials, including their personal data, would be shared.

You do *not* hold participants' contact details (e.g. addresses, phone numbers, etc.).

You have *not* promised full confidentiality to participants.

You have *not* promised that all research materials would be destroyed at the end of the research project.

You have promised full anonymization of the data at the end of the collection / research project.

You have *not* permanently deleted all indirect identifiers.

You cannot share your data

Since you no longer have participants' contact details, you cannot renegotiate the data processing terms and conditions. Anonymization is therefore your only option.

As long as you still hold (directly or indirectly) identifying data, the dataset is not anonymous, and consequently the data cannot be shared.

You can consult the resources below to find out how to fully anonymize the data. Once you have fully anonymized the data, you can carry out another shareability evaluation.

Best practices / recommendations

In the social sciences it is extremely difficult to have completely anonymous data. We recommend that you carefully examine your dataset to confirm that it is indeed anonymous as defined by the law. You can consult the resources listed below.
